Thin Solid Films 255 (1995) 337–342

thin solid films

Subject Index of Volume 255

Adsorption
influence of humidity on transport in porous silicon 272
influence of molecule adsorption on porous silicon photoluminescence 238
variations in the lattice parameter of porous silicon produced by wetting and vapour adsorption 132
Alloys
luminescence of porous multicrystalline $Si_{1-x}Ge_x$ alloys 279
Aluminium oxide
on the possible origin of the photoluminescence from oxidized nanocrystalline silicon 92
Amorphous materials
resonantly excited photoluminescence in porous silicon 250
Annealing
excitation mechanism of porous silicon luminescence: the role of sensitizers 185
light-emitting Si prepared by laser annealing of a-Si:H 302
post-treatment effects on electrical conduction in porous silicon 16
Anodic oxidation
a lateral injection porous silicon device structure for light-emitting diodes 262
in situ luminescence and IR study of porous silicon during and after anodic oxidation 87
P wells made of porous silicon for power devices: determination of the formation steps 321
Urbach edges in light-emitting porous silicon and related materials 234

Band structure
correlation between the luminescence and Raman peaks in quantum-confined systems 241
Boron
time and temperature evolution of light emission from porous silicon prepared from p^- and p^+ substrates 204

Charging
relaxation mechanisms of electronic excitation in nanostructures of porous silicon 74
Chemical vapour deposition
sub-micrometre luminescent porous silicon structures using lithographically patterned substrates 329
Clusters
the influence of the spatial structure on the electronic properties of porous silicon: quantum chemical study 39
Computer simulation
recombination dynamics in porous silicon 67
Conductivity
electrical behaviour of aluminium–porous silicon junctions 258
electronic properties and Schottky barrier of the porous silicon–Au interface 276
influence of humidity on transport in porous silicon 272
post-treatment effects on electrical conduction in porous silicon 16

Deposition process
electrodeposition of metals into porous silicon 63
Depth profiling
depth profiling of porous silicon layers by attenuated total reflection spectroscopy 181
Dielectric properties
connecting microscopic and macroscopic properties of porous media: choosing appropriate effective medium concepts 177
investigation of electrical properties of Au/porous Si/Si structures 266
Diffusion
P wells made of porous silicon for power devices: determination of the formation steps 321
realization of porous silicon membranes for gas sensor applications 310

Elastic properties
acoustic microscopy investigation of porous silicon 155
capillary and Van der Waals forces and mechanical stability of porous silicon 135
structural and elastic properties of porous silicon 174
Electrical properties and measurements
a lateral injection porous silicon device structure for light-emitting diodes 262
investigation of electrical properties of Au/porous Si/Si structures 266
photocarrier grating technique in mesoporous silicon 23
post-treatment effects on electrical conduction in porous silicon 16
resistivity of porous silicon: a surface effect 20
the electrical properties of porous silicon produced from n^+ silicon substrates 12
Electrochemistry
deposition of electrically conducting polybithiophene into porous silicon 317
electroluminescence from porous silicon after metal deposition into the pores 49
growth and luminescence of n-type porous polycrystalline silicon 96
influence of the formation conditions on the microstructure of porous silicon layers studied by spectroscopic ellipsometry 5
luminescence enhancement by electrochemical etching of SiC(6H) 107
photoluminescence from anodized and thermally oxidized porous germanium 99
the physics of macroporous silicon formation 1
Electronic devices
photocurrent collection in porous semiconductor structures 325

Elsevier Science S.A.

Electron spin resonance
defects in luminescent and non-luminescent porous Si 163
Ellipsometry
influence of the formation conditions on the microstructure of porous silicon layers studied by spectroscopic ellipsometry 5
Etching
correlation between the photoluminescence and chemical bonding in porous silicon 191
formation techniques for porous silicon superlattices 59
homogeneous chemical etching of sand-blasted silicon substrates 231
luminescence enhancement by electrochemical etching of SiC(6H) 107
micromachining applications of porous silicon 52
photoluminescent properties of porous films of tantalum silicides 298
resistivity of porous silicon: a surface effect 20
structural and luminescence studies of stain-etched and electrochemically etched germanium 282
structural study of porous silicon 128
temperature dependence of radiative and non-radiative transitions in porous silicon 216
the physics of macroporous silicon formation 1

Fluorescence
resonantly excited photoluminescence in porous silicon 250
Fourier transform infrared spectroscopy
characterization of supercritically dried porous silicon 115
depth profiling of porous silicon layers by attenuated total reflection spectroscopy 181
homogeneous chemical etching of sand-blasted silicon substrates 231
post-treatment effects on electrical conduction in porous silicon 16

Germanium
low temperature UV oxidation of SiGe for preparation of Ge nanocrystals in SiO_2 290
luminescence of porous multicrystalline $Si_{1-x}Ge_x$ alloys 279
photoluminescence from anodized and thermally oxidized porous germanium 99
structural and luminescence studies of stain-etched and electrochemically etched germanium 282
Gold
electronic properties and Schottky barrier of the porous silicon–Au interface 276

Hall effect
the electrical properties of porous silicon produced from n^+ silicon substrates 12

Indium
electroluminescence from porous silicon after metal deposition into the pores 49
Infrared spectroscopy
Fourier transform IR monitoring of porous silicon passivation during post-treatments such as anodic oxidation and contact with organic solvents 200
in situ luminescence and IR study of porous silicon during and after anodic oxidation 87
Interfaces
analysis of the surfaces structure in porous Si 123
defects in luminescent and non-luminescent porous Si 163
electronic properties and Schottky barrier of the porous silicon–Au interface 276

Laser ablation
luminescence from a $Si-SiO_2$ nanocluster-like structure prepared by laser ablation 286
preparation of porous silicon films by laser ablation 9
Laser irradiation
light-emitting Si prepared by laser annealing of a-Si:H 302
modulated photothermal reflectance on porous silicon 111
Lattice parameters
acoustic microscopy investigation of porous silicon 155
the correlation between structural and optical properties of luminescent porous silicon 167
variations in the lattice parameter of porous silicon produced by wetting and vapour adsorption 132
Light scattering
on the origin of the porous silicon luminescence 35
Luminescence
anomalous luminescence degradation behaviour of chemically oxidized porous silicon 212
characterization of supercritically dried porous silicon 115
comparison of anodically etched porous silicon with spark-processed silicon 219
correlation between the photoluminescence and chemical bonding in porous silicon 191
electroluminescence from n^+-type porous silicon contacted with layer-by-layer deposited polyaniline 43
electroluminescence from porous silicon after metal deposition into the pores 49
electron powder ribbon polycrystalline silicon plates used for porous layer fabrication 159
excitation mechanism of porous silicon luminescence: the role of sensitizers 185
Fourier transform IR monitoring of porous silicon passivation during post-treatments such as anodic oxidation and contact with organic solvents 200
growth and luminescence of n-type porous polycrystalline silicon 96
in situ luminescence and IR study of porous silicon during and after anodic oxidation 87
interpretation of the temperature dependence of the strong visible photoluminescence of porous silicon 254
investigation and design of optical properties of porosity superlattices 313
investigation of porous Si grains by optical spectroscopy 119
influence of molecule adsorption on porous silicon photoluminescence 238
influence of rapid thermal oxidation on differently prepared porous silicon 224
influence of the oxidation process on the luminescence of HF-treated porous silicon 149
light emission from recrystallized amorphous Si MQW structures 295
luminescence enhancement by electrochemical etching of SiC(6H) 107
luminescence from a $Si-SiO_2$ nanocluster-like structure prepared by laser ablation 286
luminescence of spark-processed materials 103
luminescence properties of plasma-treated silicon surfaces 305
modulated photothermal reflectance on porous silicon 111
natural oxidation of annealed chemically etched porous silicon 228
on the origin of the porous silicon luminescence 35
on the possible origin of the photoluminescence from oxidized nanocrystalline silicon 92
optical and electrical properties of porous silicon and stain-etched films 196

photoluminescence from anodized and thermally oxidized porous germanium 99
photoluminescent properties of porous films of tantalum silicides 298
porous silicon obtained by anodization in the transition regime 152
recombination dynamics in porous silicon 67
relaxation mechanisms of electronic excitation in nanostructures of porous silicon 74
simultaneous microphotoluminescence and micro-Raman scattering in porous silicon 188
slow luminescence from trapped charges in oxidized porous silicon 143
structural and luminescence studies of stain-etched and electrochemically etched germanium 282
sub-micrometre luminescent porous silicon structures using lithographically patterned substrates 329
temperature dependence of radiative and non-radiative transitions in porous silicon 216
the correlation between structural and optical properties of luminescent porous silicon 167
Urbach edges in light-emitting porous silicon and related materials 234
voltage-induced modifications of porous silicon luminescence 80

Metallization
electrodeposition of metals into porous silicon 63
Multilayers
investigation and design of optical properties of porosity superlattices 313

Nanostructures
anisotropic and polarization effects in Raman scattering in porous silicon 139
comparison of anodically etched porous silicon with spark-processed silicon 219
connecting microscopic and macroscopic properties of porous media: choosing appropriate effective medium concepts 177
correlation between the luminescence and Raman peaks in quantum-confined systems 241
deposition of electrically conducting polybithiophene into porous silicon 317
electron powder ribbon polycrystalline silicon plates used for porous layer fabrication 159
influence of molecule adsorption on porous silicon photoluminescence 238
influence of rapid thermal oxidation on differently prepared porous silicon 224
influence of the formation conditions on the microstructure of porous silicon layers studied by spectroscopic ellipsometry 5
influence of the oxidation process on the luminescence of HF-treated porous silicon 149
investigation of electrical properties of Au/porous Si/Si structures 266
light emission from recrystallized amorphous Si MQW structures 295
low temperature UV oxidation of SiGe for preparation of Ge nanocrystals in SiO_2 290
luminescence of porous multicrystalline $Si_{1-x}Ge_x$ alloys 279
luminescence of spark-processed materials 103
on the possible origin of the photoluminescence from oxidized nanocrystalline silicon 92
optical and electrical properties of porous silicon and stain-etched films 196
optical second-harmonic generation studies of the structure of porous silicon surfaces 146
photoconductivity study of self-supporting porous silicon 269
photoluminescence from anodized and thermally oxidized porous germanium 99
recombination dynamics in porous silicon 67
relaxation mechanisms of electronic excitation in nanostructures of porous silicon 74
slow luminescence from trapped charges in oxidized porous silicon 143
structural study of porous silicon 128
the correlation between structural and optical properties of luminescent porous silicon 167
the influence of the spatial structure on the electronic properties of porous silicon: quantum chemical study 39
the relation between the visible and the infrared luminescence bands in porous silicon. Comparison with amorphous Si alloys 246
theoretical descriptions of porous silicon 27
variations in the lattice parameter of porous silicon produced by wetting and vapour adsorption 132
voltage-induced modifications of porous silicon luminescence 80

Optical properties
investigation and design of optical properties of porosity superlattices 313
luminescence of spark-processed materials 103
theoretical descriptions of porous silicon 27
Optical spectroscopy
comparison of anodically etched porous silicon with spark-processed silicon 219
connecting microscopic and macroscopic properties of porous media: choosing appropriate effective medium concepts 177
interpretation of the temperature dependence of the strong visible photoluminescence of porous silicon 254
investigation of porous Si grains by optical spectroscopy 119
optical and electrical properties of porous silicon and stain-etched films 196
optical second-harmonic generation studies of the structure of porous silicon surfaces 146
picosecond dynamics of photoexcited carriers in free-standing porous silicon 77
porous silicon obtained by anodization in the transition regime 152
temperature dependence of radiative and non-radiative transitions in porous silicon 216
Urbach edges in light-emitting porous silicon and related materials 234
Oxidation
anomalous luminescence degradation behaviour of chemically oxidized porous silicon 212
influence of rapid thermal oxidation on differently prepared porous silicon 224
influence of the oxidation process on the luminescence of HF-treated porous silicon 149
low temperature UV oxidation of SiGe for preparation of Ge nanocrystals in SiO_2 290
natural oxidation of annealed chemically etched porous silicon 228
photoluminescence from anodized and thermally oxidized porous germanium 99

Oxides
structural and luminescence studies of stain-etched and electrochemically etched germanium 282

Phase transitions
on the origin of the porous silicon luminescence 35
Photoconductivity
photocarrier grating technique in mesoporous silicon 23
photoconductivity study of self-supporting porous silicon 269
Photon emission
free-carrier absorption and luminescence decay of porous silicon 70
low-temperature fatigue of photoluminescence in aged porous silicon 208
time and temperature evolution of light emission from porous silicon prepared from p^- and p^+ substrates 204
Photovoltage
photoconductivity study of self-supporting porous silicon 269
Plasma processing and deposition
luminescence properties of plasma-treated silicon surfaces 305
Polymers
deposition of electrically conducting polybithiophene into porous silicon 317
electroluminescence from n^+-type porous silicon contacted with layer-by-layer deposited polyaniline 43
Porous silicon
the electrical properties of porous silicon produced from n^+ silicon substrates 12
Position spectroscopy
positron lifetime spectroscopy of n-type and p-type porous silicon 171

Quantum effects
free-carrier absorption and luminescence decay of porous silicon 70
light emission from recrystallized amorphous Si MQW structures 295
low-temperature fatigue of photoluminescence in aged porous silicon 208
resonantly excited photoluminescence in porous silicon 250
theoretical descriptions of porous silicon 27
time and temperature evolution of light emission from porous silicon prepared from p^- and p^+ substrates 204

Raman scattering
anisotropic and polarization effects in Raman scattering in porous silicon 139
correlation between the luminescence and Raman peaks in quantum-confined systems 241
correlation between the photoluminescence and chemical bonding in porous silicon 191
investigation of porous Si grains by optical spectroscopy 119
simultaneous microphotoluminescence and micro-Raman scattering in porous silicon 188

Scanning tunnelling microscopy
preparation of porous silicon films by laser ablation 9
Schottky barrier
photocurrent collection in porous semiconductor structures 325
the electrical properties of porous silicon produced from n^+ silicon substrates 12
Semiconductors
photocarrier grating technique in mesoporous silicon 23
photocurrent collection in porous semiconductor structures 325
positron lifetime spectroscopy of n-type and p-type porous silicon 171
Sensors
micromachining applications of porous silicon 52
realization of porous silicon membranes for gas sensor applications 310
Silicides
photoluminescent properties of porous films of tantalum silicides 298
Silicon
a lateral injection porous silicon device structure for light-emitting diodes 262
acoustic microscopy investigation of porous silicon 155
analysis of the surfaces structure in porous Si 123
anisotropic and polarization effects in Raman scattering in porous silicon 139
anomalous luminescence degradation behaviour of chemically oxidized porous silicon 212
capillary and Van der Waals forces and mechanical stability of porous silicon 135
characterization of supercritically dried porous silicon 115
comparison of anodically etched porous silicon with spark-processed silicon 219
connecting microscopic and macroscopic properties of porous media: choosing appropriate effective medium concepts 177
correlation between the luminescence and Raman peaks in quantum-confined systems 241
defects in luminescent and non-luminescent porous Si 163
deposition of electrically conducting polybithiophene into porous silicon 317
depth profiling of porous silicon layers by attenuated total reflection spectroscopy 181
electrical behaviour of aluminium–porous silicon junctions 258
electrodeposition of metals into porous silicon 63
electroluminescence from n^+-type porous silicon contacted with layer-by-layer deposited polyaniline 43
electroluminescence from porous silicon after metal deposition into the pores 49
electronic properties and Schottky barrier of the porous silicon–Au interface 276
electron powder ribbon polycrystalline silicon plates used for porous layer fabrication 159
excitation mechanism of porous silicon luminescence: the role of sensitizers 185
formation techniques for porous silicon superlattices 59
Fourier transform IR monitoring of porous silicon passivation during post-treatments such as anodic oxidation and contact with organic solvents 200
free-carrier absorption and luminescence decay of porous silicon 70
growth and luminescence of n-type porous polycrystalline silicon 96
homogeneous chemical etching of sand-blasted silicon substrates 231
influence of the oxidation process on the luminescence of HF-treated porous silicon 149
in situ luminescence and IR study of porous silicon during and after anodic oxidation 87
influence of humidity on transport in porous silicon 272
influence of rapid thermal oxidation on differently prepared porous silicon 224
influence of the formation conditions on the microstructure of porous silicon layers studied by spectroscopic ellipsometry 5

influence of the oxidation process on the luminescence of HF-treated porous silicon 149
interpretation of the temperature dependence of the strong visible photoluminescence of porous silicon 254
investigation and design of optical properties of porosity superlattices 313
investigation of electrical properties of Au/porous Si/Si structures 266
investigation of porous Si grains by optical spectroscopy 119
light emission from recrystallized amorphous Si MQW structures 295
light-emitting Si prepared by laser annealing of a-Si:H 302
low-temperature fatigue of photoluminescence in aged porous silicon 208
luminescence from a Si–SiO_2 nanocluster-like structure prepared by laser ablation 286
luminescence of porous multicrystalline $Si_{1-x}Ge_x$ alloys 279
luminescence of spark-processed materials 103
luminescence properties of plasma-treated silicon surfaces 305
micromachining applications of porous silicon 52
modulated photothermal reflectance on porous silicon 111
natural oxidation of annealed chemically etched porous silicon 228
on the origin of the porous silicon luminescence 35
on the possible origin of the photoluminescence from oxidized nanocrystalline silicon 92
optical and electrical properties of porous silicon and stain-etched films 196
optical second-harmonic generation studies of the structure of porous silicon surfaces 146
P wells made of porous silicon for power devices: determination of the formation steps 321
photoconductivity study of self-supporting porous silicon 269
photoluminescence from anodized and thermally oxidized porous germanium 99
picosecond dynamics of photoexcited carriers in free-standing porous silicon 77
porous silicon obtained by anodization in the transition regime 152
positron lifetime spectroscopy of n-type and p-type porous silicon 171
preparation of porous silicon films by laser ablation 9
realization of porous silicon membranes for gas sensor applications 310
recombination dynamics in porous silicon 67
relaxation mechanisms of electronic excitation in nanostructures of porous silicon 74
resistivity of porous silicon: a surface effect 20
resonantly excited photoluminescence in porous silicon 250
simultaneous microphotoluminescence and micro-Raman scattering in porous silicon 188
slow luminescence from trapped charges in oxidized porous silicon 143
structural and elastic properties of porous silicon 174
structural study of porous silicon 128
sub-micrometre luminescent porous silicon structures using lithographically patterned substrates 329
temperature dependence of radiative and non-radiative transitions in porous silicon 216
the correlation between structural and optical properties of luminescent porous silicon 167
the influence of the spatial structure on the electronic properties of porous silicon: quantum chemical study 39
the physics of macroporous silicon formation 1
the relation between the visible and the infrared luminescence bands in porous silicon. Comparison with amorphous Si alloys 246
theoretical descriptions of porous silicon 27
time and temperature evolution of light emission from porous silicon prepared from p^- and p^+ substrates 204
Urbach edges in light-emitting porous silicon and related materials 234
variations in the lattice parameter of porous silicon produced by wetting and vapour adsorption 132
voltage-induced modifications of porous silicon luminescence 80

Silicon carbide
luminescence enhancement by electrochemical etching of SiC(6H) 107

Silicon oxide
a lateral injection porous silicon device structure for light-emitting diodes 262
analysis of the surfaces structure in porous Si 123
defects in luminescent and non-luminescent porous Si 163
electrical behaviour of aluminium–porous silicon junctions 258
low temperature UV oxidation of SiGe for preparation of Ge nanocrystals in SiO_2 290
luminescence from a Si–SiO_2 nanocluster-like structure prepared by laser ablation 286
photocarrier grating technique in mesoporous silicon 23
the relation between the visible and the infrared luminescence bands in porous silicon. Comparison with amorphous Si alloys 246

Solid electrolyte interface
P wells made of porous silicon for power devices: determination of the formation steps 321
voltage-induced modifications of porous silicon luminescence 80

Stress
capillary and Van der Waals forces and mechanical stability of porous silicon 135

Structural properties
characterization of supercritically dried porous silicon 115
growth and luminescence of n-type porous polycrystalline silicon 96
photoluminescence from anodized and thermally oxidized porous germanium 99
preparation of porous silicon films by laser ablation 9
structural and elastic properties of porous silicon 174
structural study of porous silicon 128
the influence of the spatial structure on the electronic properties of porous silicon: quantum chemical study 39

Superlattices
formation techniques for porous silicon superlattices 59

Surface and interface states
the relation between the visible and the infrared luminescence bands in porous silicon. Comparison with amorphous Si alloys 246

Surface composition
depth profiling of porous silicon layers by attenuated total reflection spectroscopy 181
Fourier transform IR monitoring of porous silicon passivation during post-treatments such as anodic oxidation and contact with organic solvents 200

Surface defects
analysis of the surfaces structure in porous Si 123
anomalous luminescence degradation behaviour of chemically oxidized porous silicon 212

Surface morphology
electron powder ribbon polycrystalline silicon plates used for porous layer fabrication 159

Surface roughness
acoustic microscopy investigation of porous silicon 155

Surface structure
micromachining applications of porous silicon 52
optical second-harmonic generation studies of the structure of porous silicon surfaces 146
Surface tension
capillary and Van der Waals forces and mechanical stability of porous silicon 135

Thermal desorption
homogeneous chemical etching of sand-blasted silicon substrates 231
natural oxidation of annealed chemically etched porous silicon 228
Transmission electron microscopy
formation techniques for porous silicon superlattices 59

Tunnelling
electrical behaviour of aluminium–porous silicon junctions 258

Wetting
influence of humidity on transport in porous silicon 272

X-ray diffraction
realization of porous silicon membranes for gas sensor applications 310
X-ray photoelectron spectroscopy
correlation between the photoluminescence and chemical bonding in porous silicon 191
electrodeposition of metals into porous silicon 63
electroluminescence from n^+-type porous silicon contacted with layer-by-layer deposited polyaniline 43
